

Dear Councillor/Elected Representatives,

As your constituents, we respectfully request that you create a Task Force to provide a forum for discussing current and emerging issues in the technology sector that are important to our community.

This Task Force would encourage the development and dissemination of practical tools and approaches to technology issues within our municipal context. More specifically, we request this Task Force address the public and biological health ramifications of installing wireless networks, microcells, and 5G in our community, as well as issues of privacy, data security, property value, and liability.

Membership

Membership could be open to all constituents who are engaged in technological issues within the municipal context, with participants representing a broad spectrum of interests, backgrounds and opinions on this issue.

We propose that all meetings of The Task Force be videotaped, and that the Task Force issues a report and recommendations for our local government to follow within a specified period,

All the Best,

Name

Organization
